

Flash in PC and Enterprise Computing

Paul Prince – CTO Enterprise Systems

August, 2008

We said last year...

SSD had benefits for PCs:

- **Acoustics**
- **Reliability**
- **Durability**
- **System responsiveness and performance**
- **System start/boot up**
- **Power consumption**
- **Potential weight reduction**

And, We Delivered

Flash Benefits in Dell Products:

- Acoustics
- Reliability
- Durability
- Performance
- Boot time
- Power
- Weight

Flash in PCs is a Continuing Focus

A Year of Progress for PCs

Standards

- NVMHCI specification completed
- T13/ATA command set improved

Products

- SSDs of all kinds
- Flash acceleration products (e.g. H-HDD, Intel Turbo Memory)

Surprises

- Markets: SSDs with lower capacity/cost for emerging markets
- Technology: Faster than expected MLC adoption in PCs
- Value: >10k RPM performance in notebooks (already!)

What About Enterprise?

SSD Benefits

- Embedded intelligence
- Random I/O performance
- Power consumption
- Storage density

SSD Segmentation

Cost, IOPS, Duty Cycle ↑

Market	Platform Types
Enterprise – High Performance 300X SSD 20-50K RR IOPS	Storage / Servers
Enterprise – Mid Performance, Power, Reliability 66X SSD 10K RR IOPS	Servers / Storage Workstations
Enterprise – Performance. Power, Reliability 10X SSD 4K RR IOPS	Servers Workstations
Enterprise – Boot, Power, Reliability 2X SSD ~600 RR IOP	Blades, Servers

Industry Focus Needed

- **Standards: NVMeHCI, SMART**
- **Enterprise Performance: > Enterprise HDD**
- **Enterprise Reliability: > Enterprise HDD**
- **Performance Complexity : Simplified positioning**

A close-up, low-angle shot of several hard drive platters stacked vertically. The top platter is in sharp focus, showing its circular surface with a central hub and several screws. The background is blurred, showing other platters and the mechanical structure of the drive.
