

# Adding Edge Storage in Connected Home, Automotive and Industrial Markets

Nathanaelle Klein  
SanDisk Corporation

# Forward-looking statement

During our meeting today we will be making forward-looking statements.

Any statement that refers to expectations, projections or other characterizations of future events or circumstances is a forward-looking statement, including those relating to industry trends, standardization plans and any SD Association's related plans,.

Actual results may differ materially from those expressed in these forward-looking statements including due to various factors.

We undertake no obligation to update these forward-looking statements, which speak only as of the date hereof.

# Edge storage augments the Cloud

Volume

Overcome Networking  
Limitations

Velocity

Enable Real-time  
Analysis

Value

Guaranteed User  
Experience (QoE & QoS)

# Flash at the Edge of the Network

User Experience

Local Backup

Network Optimization

Privacy and Security

Connected Home

Automotive

Industrial

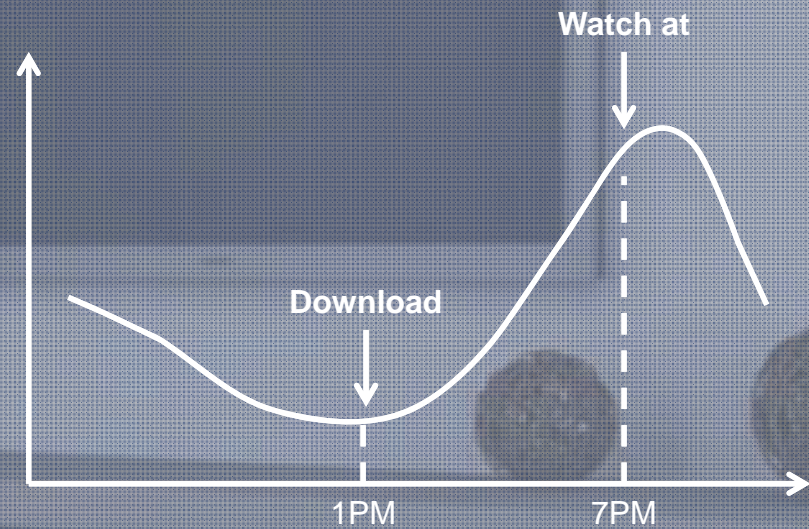

# Connected Home Use Case Examples

**Pause Live TV**  
Immediate Rewind/FFWD

**Pre-positioning**  
Predicting what consumer will watch next

## Application Specific Features

At end of life, card failure results in customer dissatisfaction.

**Q: What if we knew ahead of time when a card reaches end of life?**

Application requires high endurance card. Non-qualified cards may not meet the customer spec.

**Q: How could we ensure that the card inserted was qualified?**

“Too many set top boxes sent for refurbishment don’t include the cards.”

**Q: How could we limit the card usage to a specific host?**

Additional features/FW fix may require a FW change and the need to send the cards back for update.

**Q: What if we could update the firmware on the cards already deployed in the field?**

## Creating Value With New Features

### Health Status

The health status feature maximizes the card's usage by signaling ahead of time when to replace it

### Programmable String

The programmable string enables a unique ID per vendor/host to track qualified cards

### Host Lock

Host lock enables to protect both the card content and the card itself

### Secured FFU

sFFU saves the cost associated with the return of card back for firmware update

# Standardization For Greater Adoption

**Standardization**

**User Interface**

**Application layer**

**Driver layer**

**New feature in card**
