

Extend the Life of Your SAN with Flash

Andrew Flint  VP Marketing

August 10, 2016

Goals

Integrate Flash easily, effectively,
and within budget

Extend the life of existing storage

Share, optimize Flash resources to
deliver QoS service levels

No Rip &
Replace

No Waste

No Manual
Migration

The All Flash Data Center

The All Flash Reality

We aren't all Facebook

We will always have a hybrid storage model

Plus there simply isn't enough flash on the planet...

HDD & SDD

Old Flash
& New Flash

Flash &
3D XPoint

ioFABRIC Vicinity

Cost Efficiency

Business Agility

Flash Optimized

**Transform Your
Storage**

**Transform Your
Business**

Performance

Capacity

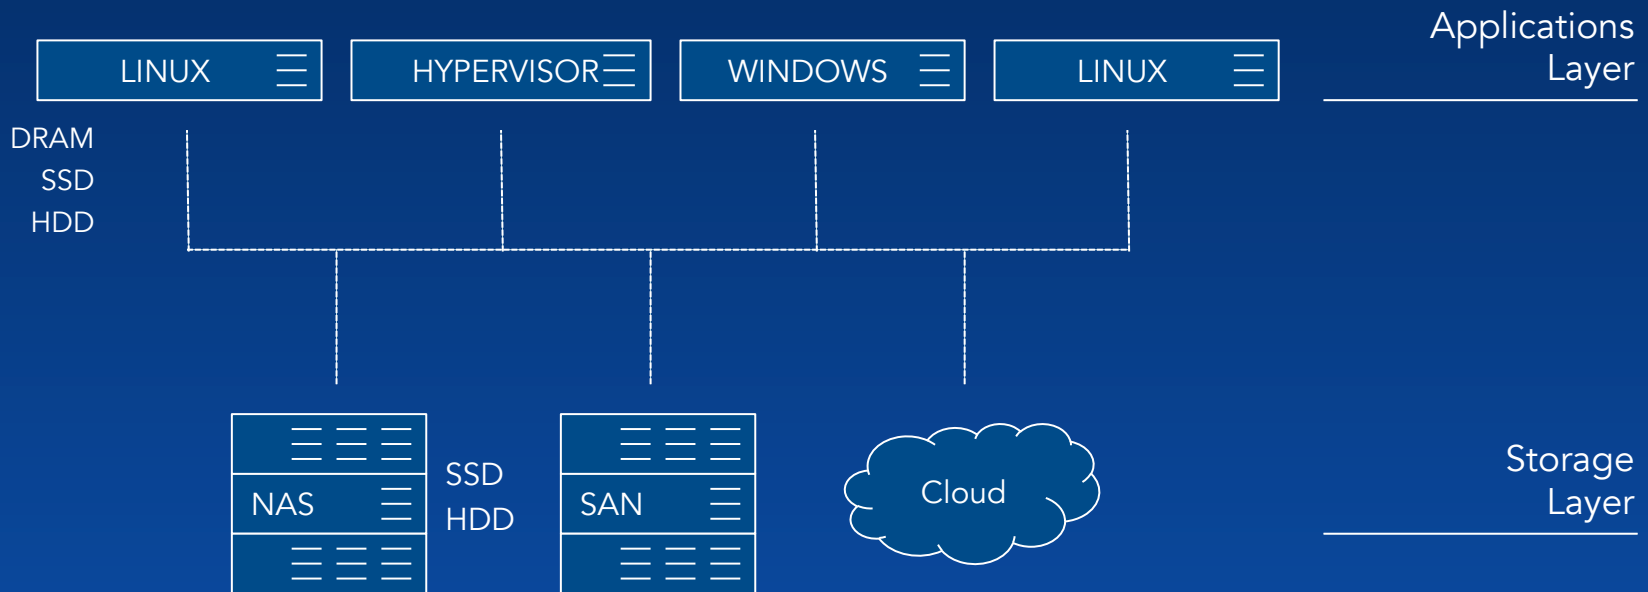

Protection

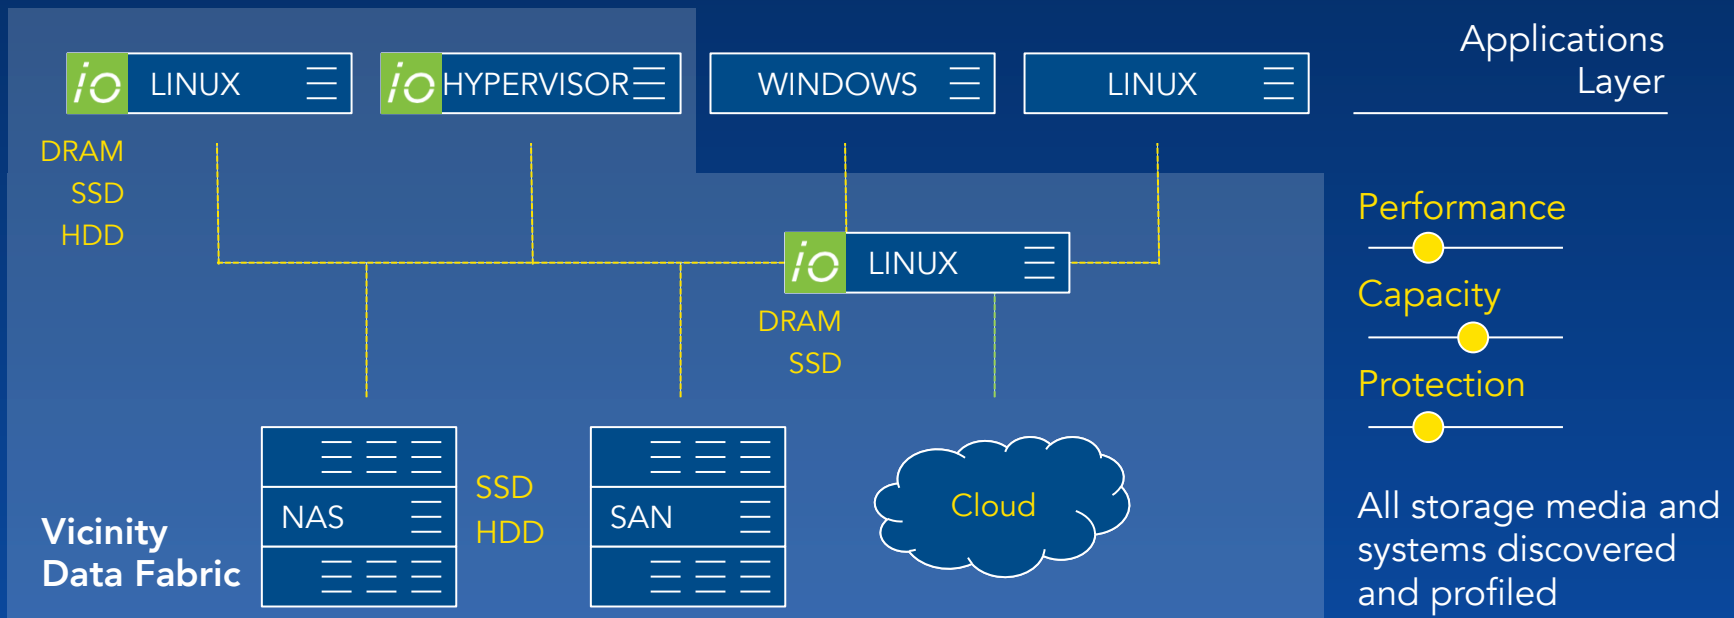

Current Storage Infrastructure

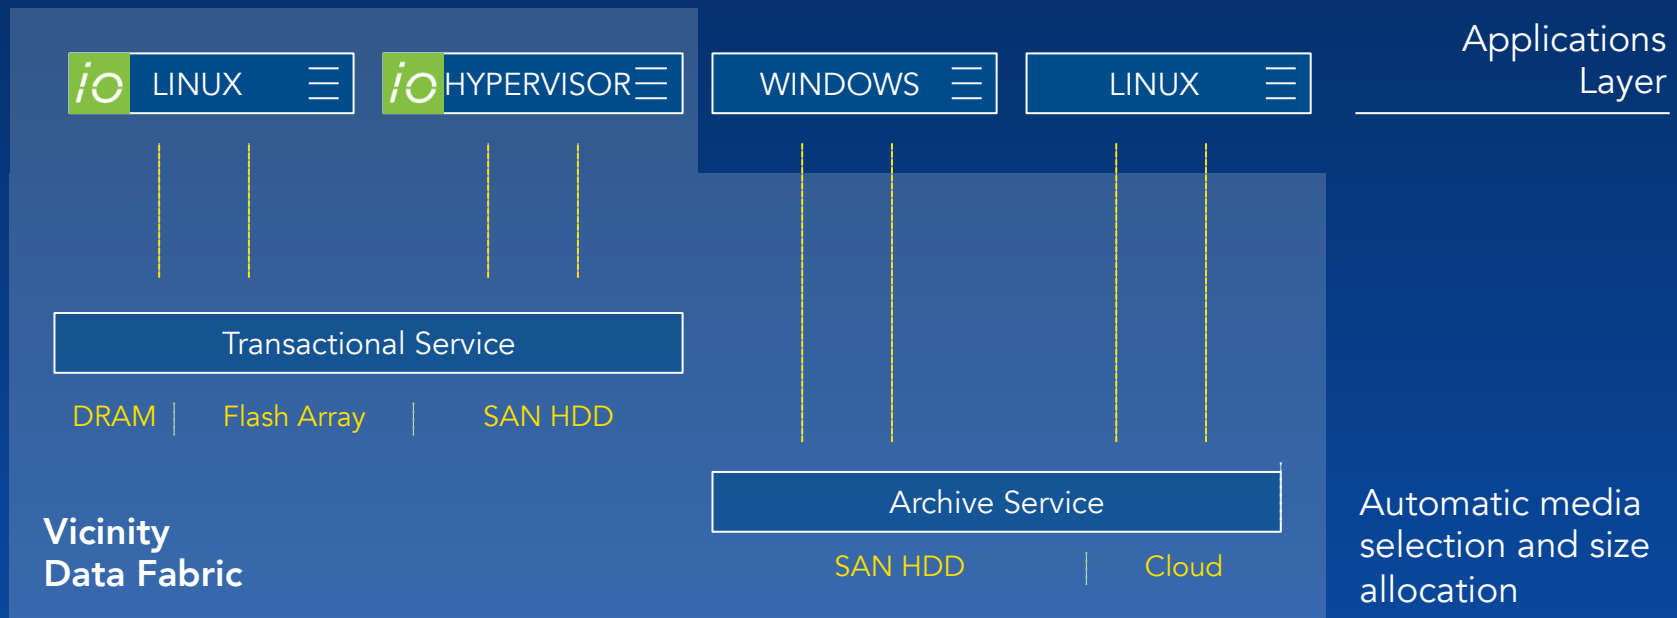

Vicinity Profiles Resources

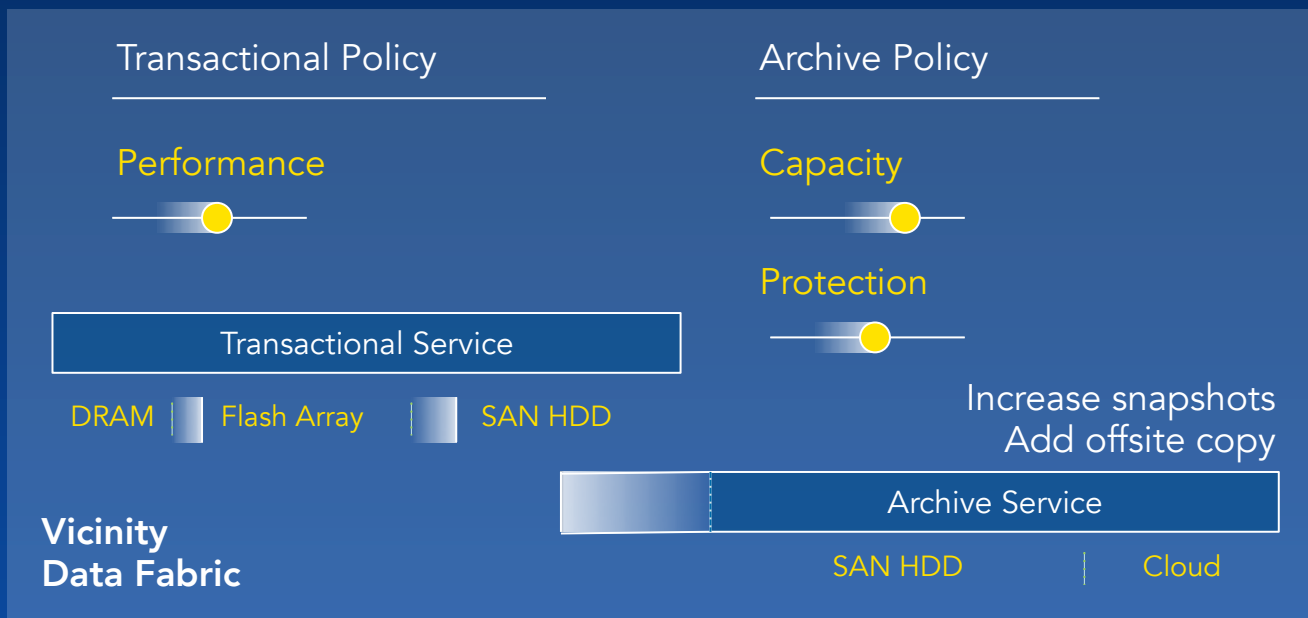

Vicinity Delivers Service Levels

Services Adapt to Changing Needs

Responds in real-time to infrastructure and policy changes

SAN Challenges

The Challenge

Lack of performance

Lack of capacity

Lack of newer features

Expensive to upgrade, maintain

Siloed

The Solution

Seamlessly front-end with Flash

Flash capacity plus long-tail Cloud

SDS

Use in less demanding roles

Unify

Flash Challenges

The Challenge

Expensive and more performance than needed (1M+ IOPS NVMe)

Where to place Flash and what apps, what data?

Manual migration of application data to Flash

The Solution

Shared Flash. Flash becomes a resource that all apps can use

Automatic utilization. Flash use decided by policy settings

Seamless utilization. Flash for performance data, stale on HDD

Flash with Existing Storage

Make the most of what
companies already have

**Not
Wasteful**

Inject Flash technologies into
the existing infrastructure

**Not
Expensive**

Non-disruptive, and
no new data silos

Flash with Existing Storage

Replace primary storage
with Flash

Flash
Optimized

Keep existing SAN for
overflow/archival purposes

Cost
Effective

Future proofed:
change is constant

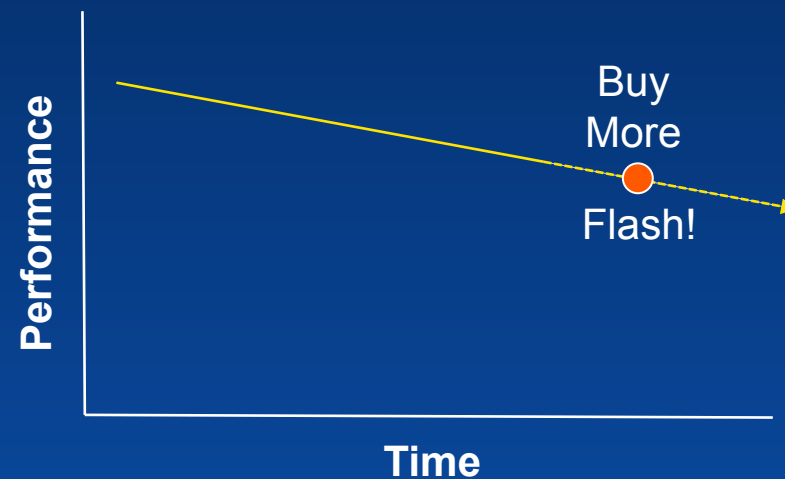

Grow Dynamically

Metrics and
trend lining

Add Flash
performance as
needed

New resources
effectively used

Summary

Flash as a shared resource handling multiple workloads concurrently

Seamlessly extending SAN life

SAN and Flash automatically used to deliver assured service levels
