

Flash Memory Summit

PMEM-201-1

Persistent Memory: Remote Persistent Memory

Chairs:

Rob Peglar, Advanced Computing and Storage

Paul Grun, Cray and OpenFabrics Alliance

Sponsored by:

Agenda

- First Half - Speakers
 - Paul Grun, Cray
 - *Remote Persistent Memory – The Case for Use Cases*
 - Kurtis Bowman, Gen-Z Consortium
 - *The Impact of Persistent Memory on Interconnects and Fabrics*
- Second Half- Panel

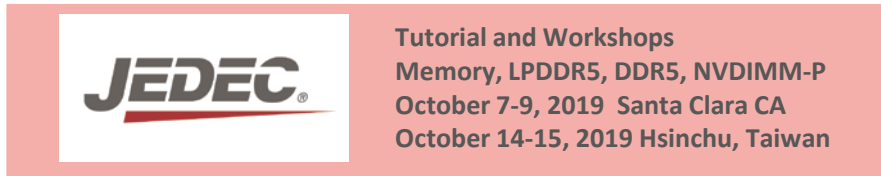

Flash Memory Summit

Upcoming PM Events

SDC 19 | Storage Developer Conference
September 23-26, 2019
Santa Clara, CA

JEDEC | Tutorial and Workshops
Memory, LPDDR5, DDR5, NVDIMM-P
October 7-9, 2019 Santa Clara CA
October 14-15, 2019 Hsinchu, Taiwan

SNIA PERSISTENT MEMORY
PM SUMMIT
JANUARY 23, 2020 | SANTA CLARA, CA

Pick up your conference registration discount card at **SNIA booth 820**

Register at www.jedec.org

Complimentary registration now open at snia.org/pm-summit

Programming
Technical Work
Group**

Idan Burstein

Mellanox

Wayne Rickard

Radian Memory

- SNIA and the OpenFabrics Alliance (OFA) are working to enable and accelerate the adoption of Remote Persistent Memory...
 - By providing standards and enabling software
 - By providing open source APIs
- ... which depends on a clear elaboration of 'use cases' for RPM
 - Some of which have been explored at past Flash Memory Summits
- It also depends on understanding the relevant characteristics of the underlying technology
 - Which we will be exploring today

SNIA & OFA Collaboration Objectives

1. OFA + SNIA
 - Develop a set of example use cases for RPM
 - Generate a Whitepaper outlining those use cases
2. SNIA NVMP TWG
 - Generate Whitepapers describing each use case
3. OFA OFIWG
 - Generate open source network APIs to support those use cases

The Resulting Network APIs Must

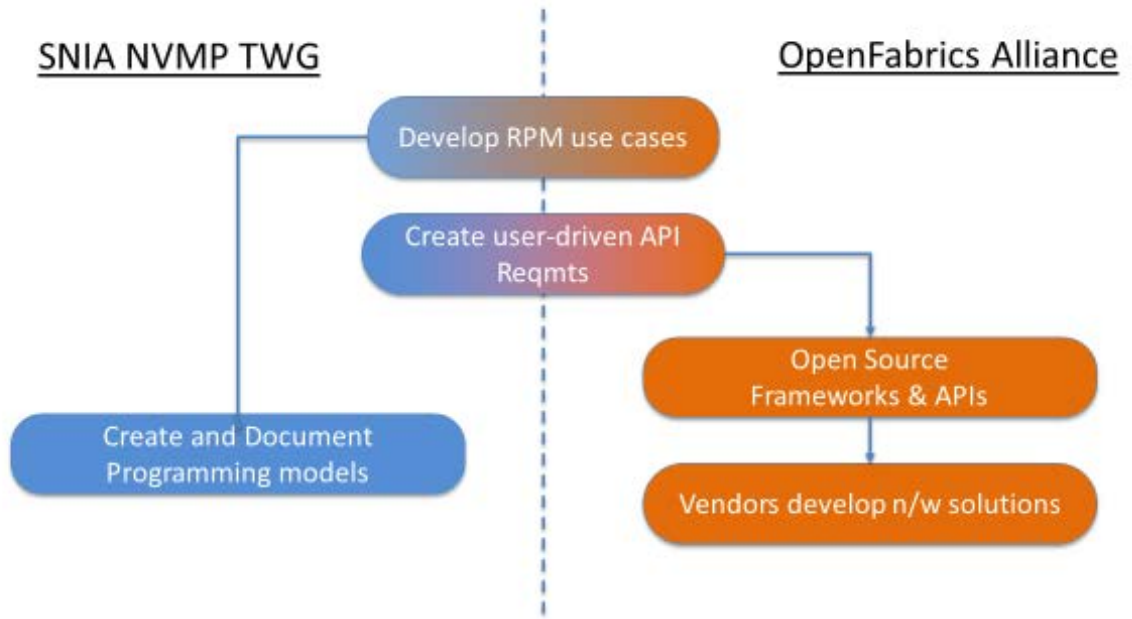

- Be open source and freely available
- “Transport neutral”
 - i.e. not specific to any particular network architecture
- Application-centric
 - i.e. responsive to the needs of applications that consume them

Started in 2017,
this is a long-
running Work in
Progress.

The goal is to
accelerate
adoption of
Remote Persistent
Memory.

ANNOUNCING - SNIA & OPENFABRICS ALLIANCE

Flash Memory Summit

CXL & Gen-Z

Kurtis Bowman – Dell Server Office of the CTO

CXL – The New Kid On The Block

Caching Devices / Accelerators

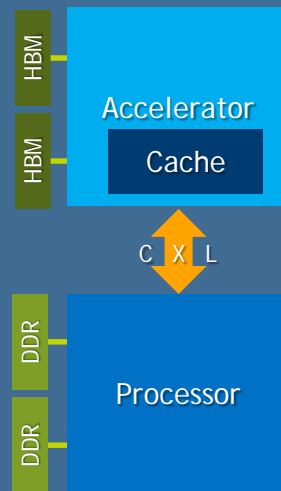

- Protocols:
- CXL.io
 - CXL.cache

Type 1 Device

Accelerators with Memory

- Protocols:
- CXL.io
 - CXL.cache
 - CXL.memory

Type 2 Device

Memory Buffers

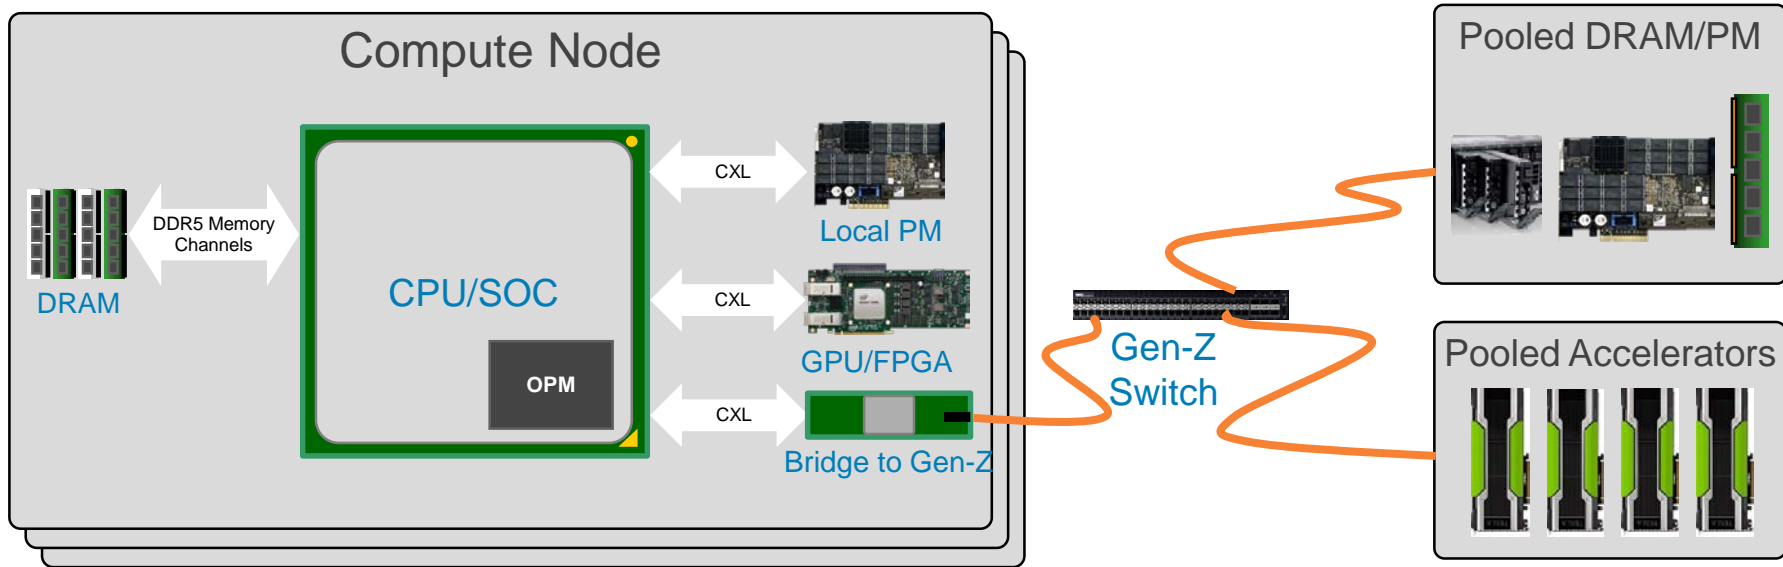

- Protocols:
- CXL.io
 - CXL.mem

Type 3 Device

Gen-Z & CXL: In The Data Center & At The Edge

Flash Memory Summit

Thank You
